

StingRay RF over Fibre

DWDM (Dense Wavelength Division Multiplexing),
40 wavelengths, up to 500 km distance,
200 series **L-band module** with ultra high gain receive module for increased optical budget

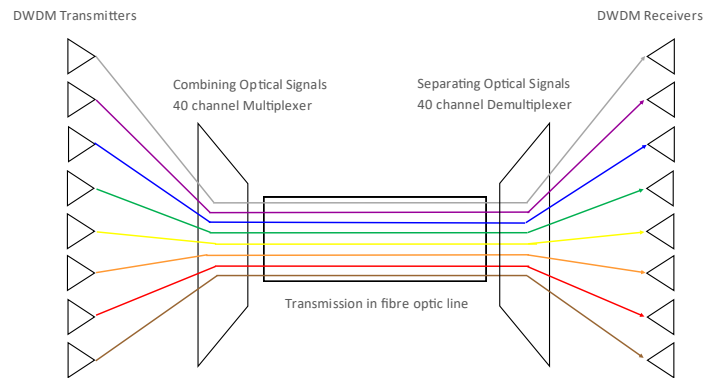

The StingRay DWDM 200 Series of L-band RF over fibre units are designed to provide compact fibre links, with forty wavelengths on a single fibre cable, and transmission distance of up to 500 km with optical amplifiers. The transmit modules benefit from a high and wide dynamic range with automatic link optimisation ensuring high quality L-band transmission.

The StingRay DWDM system comprises of transmit modules and a multiplexer module to combine up to 40 wavelengths on to a single fibre cable at the transmit end. A demultiplexer module and receive modules are then used at the receive end to split the separate wavelengths.

For more wavelengths and longer distances, please contact us.

Typical applications:

- Ku-band and Ka-band ready for HTS applications
- Long distance distribution of comms traffic across site with minimal loss - up to 500 km distances
- General satcoms- teleports, video head-ends, TVRO
- Compact solution for small quantity links such as tactical HQ

Fibre Modules

850 - 2450 MHz
operating frequency range

Up to 40 wavelengths on a single fibre cable

Up to 500 km transmission distance with transmit, receive and optical amplifier module options

LNB Powering 13/18V on TX modules only

High isolation between modules for signal quality

Chassis Options

Compact indoor & outdoor chassis options, which can be part populated

Remote control & monitoring via RJ45 Ethernet port with SNMP & web browser interface

Local control & monitoring via front panel push buttons & display

Resilience from dual redundant hot-swap power supplies, hot-swap fibre modules & fans

10MHz Inject from an external source chassis option

Indoor chassis showing hot-swap power supply modules, fibre modules and fans

Outdoor Unit (ODU)
